SCA Scan Results (5 Results)

Npm-braces-3.0.3 (1 Result)

Package Name: braces

Version: 3.0.3

Total Results: 1

Category: CWE-674
Total Results: 1

Result 1 of 1 - Vulnerability

High • Recurrent • To Verify • Outdated: no • Found First: 28 Oct, 2026
Result ID: 9mHCYrU9ON8BmYSGkqV3eO82LRT3ybHbaVdEmlCHH98=
First Scan ID: 6fd0e95c-fe6a-4da6-ad86-e5e83aa0a321

> CVE: CVE-2026-93687
> Recommended Version: N/A
> Description: Braces contain a stack overflow vulnerability in the recursive AST walkers that lack depth guards. Attackers can supply deeply nested brace patterns under the character limit to exhaust the call stack and terminate the Node.js process with an uncaught RangeError.
> References: Advisory • Issue

Npm-picomatch-2.3.2 (1 Result)

Package Name: picomatch

Version: 2.3.2

Total Results: 1

Category: CWE-1333
Total Results: 1

Result 1 of 1 - Vulnerability

High • Recurrent • To Verify • Outdated: yes • Found First: 28 Oct, 2026
Result ID: oHFTkhCIoW30BsbxITfectEJo01xYq6xso77TC4SPyg=
First Scan ID: 6fd0e95c-fe6a-4da6-ad86-e5e83aa0a321

> CVE: CVE-2026-112366
> Recommended Version: N/A
> Description: Picomatch through 4.0.7 contains a regular expression denial of service vulnerability that allows attackers to block the event loop by supplying single-branch repeated extglob patterns. Attackers can provide globs like +(*) or +(*a), which analyzeRepeatedExtglob in lib/parse.js skips, causing exponential backtracking against short crafted strings and denying service to Node.js applications.
> References: Advisory • Pull request

Npm-picomatch-4.0.7 (1 Result)

Package Name: picomatch

Version: 4.0.7

Total Results: 1

Category: CWE-1333
Total Results: 1

Result 1 of 1 - Vulnerability

High • Recurrent • To Verify • Outdated: no • Found First: 23 Oct, 2026
Result ID: wLAbnx97cIN3LQtnZeiqJfuB0n9J+INGVnEE8Ae98sw=
First Scan ID: 2ff168ad-1901-40f7-8335-f5309c7e774c

> CVE: CVE-2026-112366
> Recommended Version: N/A
> Description: Picomatch through 4.0.7 contains a regular expression denial of service vulnerability that allows attackers to block the event loop by supplying single-branch repeated extglob patterns. Attackers can provide globs like +(*) or +(*a), which analyzeRepeatedExtglob in lib/parse.js skips, causing exponential backtracking against short crafted strings and denying service to Node.js applications.
> References: Advisory • Pull request

Npm-uri-js-4.4.1 (2 Results)

Package Name: uri-js

Version: 4.4.1

Total Results: 1

Category: CWE-835
Total Results: 1

Result 1 of 1 - Vulnerability

High • Recurrent • To Verify • Outdated: no • Found First: 26 Oct, 2026
Result ID: KVdSSasp4E0HmtlxgXrCi701ZjuBdpww/nc84aX05gs=
First Scan ID: 8b63fab7-4571-40f9-83f1-573aac0309f6

> CVE: CVE-2026-93690
> Recommended Version: N/A
> Description: uri-js through 4.4.1 contains a denial of service vulnerability in the "removeDotSegments" function that loops infinitely when a path segment begins with Unicode line or paragraph separators. Attackers can trigger this by calling removeDotSegments directly or through normalize/resolve functions with IRI handling enabled, causing the Node.js event loop to block indefinitely until heap exhaustion.
> References: Advisory

Package Name: uri-js

Version: 4.4.1

Total Results: 1

Category: CWE-176
Total Results: 1

Result 1 of 1 - Vulnerability

Medium • Recurrent • To Verify • Outdated: no • Found First: 26 Oct, 2026
Result ID: BoZXWvzXEarLWHH2AqWkyJGEBsjUlP2jibfGtLrzRy8=
First Scan ID: 8b63fab7-4571-40f9-83f1-573aac0309f6

CVE: CVE-2026-93751
Recommended Version: N/A
Description: uri-js contains an improper UTF-8 decoding vulnerability in pctDecChars() that decodes invalid and overlong percent-encoded sequences into ASCII metacharacters. Attackers can craft percent-encoded payloads to bypass platform decoder validation and inject path traversal or CRLF sequences that downstream consumers process without filtering.
